The dentist treats a cavity
What is a cavity?

A cavity is a hole in the tooth.

- I need to treat a cavity because it can hurt.
The dentist gives me a local anesthetic

The dentist can make my tooth fall asleep.

- He puts a product on my gums so I won't feel the shot.

- He gently gives me a shot on the side of the tooth.

It tastes funny
The dentist rinses my mouth out with water.

The dental assistant sucks up the water at the same time.

I have a funny feeling in my mouth.
It does not hurt when the dentist touches my tooth.

I can’t feel anything.
The dentist removes the cavity

He removes the cavity with a small vibrating machine.

- The machine also puts water and air in my mouth.
Then the dentist fills the hole in my tooth.

- The dentist can use the air blower to dry my teeth.

- He puts a product on my tooth.

- The dentist fills the hole in the tooth with a kind of paste.
- He hardens the paste with a blue light.

He rinses my mouth and the assistant sucks up the water.
Sometimes he tells me to rinse my own mouth out with water.

- I spit in a small sink next to the chair.
I must come back in 6 months to make sure that everything is going well.
