

Pain

Indicating and relieving pain

What is pain ?

Pain is an unpleasant feeling.

● I feel fine.

● I'm in pain.

Pain can be mild or acute.

It is important to say :

● when I am in pain,

● when I'm scared.

● People can help me feel less pain or less scared.

How do I say I am scared or in pain ?

I can talk.

I can show where I'm in pain.

On my body

On a drawing

I can use my communication binder.

I can show if I have mild, average or very acute pain on a scale.

- There are different scales :

A graduated scale,

the smiley scale,

a progressive scale.

I can go to the doctor with my scale.

I can also show how scared I am with :

A graduated scale,

the smiley scale,

a progressive scale.

I can go to the doctor with my scale

To feel less pain

The doctor can give me medication, for example :

- Pills : I swallow them with a little water.

- Syrup : I drink it.

● **A suppository.**

I insert it in my anus.

I can do it alone.

I can ask someone to do it for me.

● **A patch.**

It is kind of like a bandage, but with medication.

I keep it on for several days.

- **An IV drip.**

The medication is in a liquid and goes directly into my blood.

For more information, see the document on IV DRIPS.

How to feel less pain during care

The pain is not as strong if I am not scared.

To help me :

- the doctor explains things to me using simple words,

- a person that I know can stay with me.

The pain is not as strong when I am relaxed.

- I sit down comfortably:

On a chair,

on a bed.

● **I breathe calmly :**

**I breathe in,
my stomach inflates,**

**I breathe out,
my stomach deflates.**

● **At the hospital, I can have MEOPA.**
I breathe into a mask during the treatment.
I feel calmer.

● **I can get hypnosis.**

For more information, see the document on MEOPA.

The pain is not as strong when I think about something else.

For example, I can :

- **talk to the person I'm with,**

- **listen to music,**

- **watch a movie.**

● play,

● draw,

● look at a book.

How to avoid pain during care

I can get local anesthesia so that I don't feel any pain.

- With some anesthetic pomade : it needs to be applied two hours before the treatment.

- Or with an anesthetic patch : it needs to be put on two hours before the treatment.

- With a shot to numb the pain.

The shot numbs my skin.

The doctor can perform the treatment :
I no longer feel any pain.

I can be completely put to sleep :

- **with general anesthesia.**

For more information, see the booklet GENERAL ANESTHESIA.

SantéBD Multilingual is a project supported by the Orange Foundation.

Where can I find SantéBD booklets?

- **On the internet:**

Visit the website: <http://www.santebd.org>

- **On my tablet or smartphone:**

Download the SantéBD app from:

All SantéBD booklets are free.

SantéBD is a project by the NGO CoActis Santé.
